

Domain & URL Guide

This document lists all active URLs associated with your platform.

Main Connected Domains (Hostinger)

These are your primary, custom domains. They will become fully active as soon as the DNS propagation finishes (typically 5 to 60 minutes after you update the A records in Hostinger).

- **Main Website:** <https://amrsamir.me>
- **Admin Dashboard:** <https://admin.amrsamir.me>
- **CV Tracker:** <https://cv.amrsamir.me>

Temporary Vercel URLs

While you wait for the DNS propagation on Hostinger to complete, you can use these Vercel-generated URLs immediately. They are live right now and bypass the DNS wait time.

- **Main Website:** <https://amrsamir-me-final.vercel.app>
- **Admin Dashboard:** <https://amrsamir-me-final.vercel.app/admin/>
- **CV Tracker:** <https://amrsamir-me-final.vercel.app/cv/>

A Note on Form Responses

Your contact form on the main website has already been fully integrated with your custom backend. When a visitor submits a message on the main site, it does **not** use third-party services like Formspree anymore.

Instead, it securely pushes the data directly into your Supabase database (`form_submissions` table), and you can read the messages in real-time by clicking the **"Inbox"** tab right here in your Admin Dashboard!
